General Agents Fundamentals Part 1 Exam

Sheikh Mohammad Ahmed

Frontend Developer | AI Developer | Hackathon Winner (1200+ Participants) | Building Practical Solutions Through Hackathons & Real-World Projects

Karachi Division, Sindh, Pakistan

Summary

I'm Sheikh Mohammad Ahmed — a young builder focused on turning ideas into real, working products through code, design, and AI. Recently, I secured 1st position among 1200+ participants at the SMIT Grand Coding Night 2026, where I built a working frontend product in a 12-hour overnight sprint using HTML, CSS, and AI-assisted workflows. My journey started early at Techno Kids, where I built a strong foundation using tools like MS Paint, MS Office, Canva, and Google Forms. That phase taught me discipline, consistency, and the habit of learning by doing. I continued at Saylani Mass IT Training, where I transitioned into web development — learning HTML, CSS, and JavaScript — and began understanding how to translate ideas into functional digital experiences. To gain real-world exposure, I co-founded Markaaf Studio and later led it as CEO, working with a 12+ member team on client outreach and software services. While the studio eventually closed, it gave me hands-on experience in leadership, execution, and team dynamics. We faced challenges in execution and direction, which helped me realize the gap between learning and building real systems that work under pressure. Now, I focus on combining frontend development with AI to build faster and smarter. I use tools like Claude Code, Gemini CLI, Python, and the OpenAI Agents SDK to experiment with automation and AI-driven workflows. Currently, I'm advancing my skills at Panaversity, focusing on AI agents, automation, and spec-driven development while building real-world projects. My core stack includes HTML, CSS, JavaScript, Bootstrap, Git, GitHub, Python, UV, and specification-driven development practices. I'm looking to collaborate on meaningful tech projects, learn from experienced builders, and contribute to real-world products and open-source. Let's connect. ---My GitHub: <https://github.com/sheikh-mohammad>

Co-Founder
May 2025 - July 2025 (3 months)
Karachi Division

Chief Executive Officer
May 2025 - July 2025 (3 months)
Karachi Division
CEO | Markaaf Studio

May 2025 – July 2025

CEO Markaaf Studio, a startup software house providing web development, UI/UX, branding, and digital presence solutions. Worked with a 12+ member team, contributing to service design, client outreach, and project planning.

Engaged with multiple potential clients and progressed several discussions toward collaboration. The venture concluded due to early-stage operational and execution challenges, offering valuable lessons in startup leadership, team alignment, client trust, and execution discipline.

This experience strengthened my entrepreneurial mindset and clarified the importance of focus, communication, and sustainable systems in building a software business.
